

Abhinav Malviya *Mobile App Developer | Android (Java, Kotlin) | iOS*

malviyaabhinav4321@gmail.com • +91 9198885722 • Noida • GitHub • LinkedIn • Portfolio

SKILLS

Programming: Java, Kotlin

Android: Jetpack Compose, XML, MVVM, Clean Architecture, Coroutines, Flow, Lifecycle-aware components, Compose Multiplatform (KMP)

Backend & Cloud: REST APIs, Retrofit, Ktor, Spring Boot, MongoDB, Firebase, AWS S3

Database & Storage: Room, SQLite, SQLDelight, Offline Caching, DataStore

Testing & Tools: JUnit, Espresso, Postman, Docker, Git, GitLab, CI/CD, Maven, Apache Kafka, Load Testing

Distributed Systems & CS Fundamentals: Scalability, Reliability, Resilience, Fault Tolerance, High Availability, Observability, DSA, DBMS, OS, Computer Networks, Scalable client architecture, Memory optimisation

EXPERIENCE

Digital Media

12/2025 | Noida

Mobile Application Developer 

- **MintX**  - Architected and developed a production-grade Android application using **Kotlin, MVVM, Coroutines, and Firestore**, implementing a real-time wallet, XP-based levelling, and rewards system.
- Integrated **Google & Phone OTP authentication** with secure session handling and atomic Firestore transactions for wallet consistency.
- Built an AI-powered automated question generation system using **Google Gemini API** with duplicate detection and **CI/CD** automation via GitHub Actions.
- Developed a web-based **Admin Dashboard (HTML, CSS, JavaScript)** for question moderation, user management, wallet control, and reward approvals.
- Implemented **AdMob monetisation strategy (App Open, Interstitial, Rewarded Ads)** with Remote Config, custom animations, shimmer loading, and offline fault-tolerant architecture for enhanced engagement and performance.

Raptocross Pharma Pvt. Ltd.

11/2023 – 08/2025

Android & Backend Developer 

- Sole technical engineer responsible for designing and delivering a complete enterprise field management system serving 50+ employees.
- Built a full-stack mobile + admin platform with real-time doctor visit tracking, geofencing validation (100m radius), and DCR reporting system.
- Architected cloud-backed Firebase infrastructure with offline-first synchronisation and secure media upload pipeline.
- Designed a system with a modular backend architecture, enabling future migration to a SaaS product architecture.
- Owned the complete lifecycle from architecture to deployment and operational stability. **Play Store link** 

PROJECTS

Notout-11

11/2024 – 06/2025

Fantasy Sports Platform Application

- Contributed to a large-scale fantasy gaming platform serving **6M+ users**, handling traffic spikes of **800K–1M concurrent users during live contests**.
- Engineered wallet and payment reconciliation flows across multiple gateways (Razorpay, PhonePe, Paytm, Cashfree, UPI).
- Optimised performance-critical modules using JNI (C++ via NDK) for enhanced runtime efficiency.
- Improved build and release pipelines using multi-flavour Gradle architecture.
- Worked on high-scale user lifecycle systems, including contest state transitions and leaderboard updates.
